Entering Form Queries and Notes:

You can record queries about the form as a whole as well as a section of the form or a specific field. (Field-level queries can be added by hovering over the field name and clicking the blue “+” button that appears.)

The process for viewing, responding to, or closing a query is the same as that for a visit-level query. Click on the button that shows the presence of a query (there will be a “1” or greater instead of “0”) and respond to or close it.
